Why miss a decibel of breaking twigs?

Hit the bull’s eye: 131 decibels

A twig snaps in the forest. Is it your prey, the breeze or a hunting partner? To make sure you hit your target you have to properly interpret the sounds of nature. That’s why we have developed a sound-enhancing instrument that also protects your hearing: SecureEar – a new way to sharpen your hearing.

The new sound-enhancing instrument that protects your ears.

The information in this document contains general descriptions of the technical options available, which do not always have to be present in individual cases and are subject to change without prior notice. The required features should therefore be specified in each individual case at the time of conclusion of the respective contract.
SecureEar protects and supports you. It’s available in two different skin-colors.

Good eyesight and a steady hand are essential when you’re hunting, and so is a keen sense of hearing. But the loud blasts of the shotgun pose a dilemma: Wearing uncomfortable muffs to protect your ears from the noise of the gun you might not be able to hear the game, or your companions, or even the noise you make yourself and which could scare away the prey.

SecureEar™ is the new solution from Siemens. This small instrument is ideal if you want to protect your ears but you don’t want to miss the snap of a twig in the woods. And it’s not just for hunting; SecureEar is also recommendable when you’re working on sites with loud noises.

Enhance the experience. Sharpen your senses.

Raise your awareness. Improve safety.

Exact fit.
SecureEar is worn inside the ear canal. A Hearing Care Professional fits the instrument individually based on an impression of your ear. The exact fit of the instrument acts like a plug that dampens the report of the gun. This high passive protection can reduce the blast of a rifle by up to 35 dB.

Acoustic telescope.
SecureEar also incorporates hearing technology that picks up and slightly amplifies the sounds relevant for hunting (including soft sounds like leaves rustling or a normal conversation). It acts like an acoustic telescope which you can adjust to suit the occasion. If your hearing is good, it will be better with SecureEar.

Sound expertise.
As a world leader in the field of audiology, Siemens can guarantee top sound quality. A four-channel chip with digital processing allows you to hear what you want even better than normal.

Uncompromised hearing.
The instrument settings are pre-defined for optimum impulse noise protection as well as loud noise suppression — without any compromise to hearing and understanding.

If you like to travel light, this inconspicuous instrument will give you no trouble.

Tailored exactly to your individual ear shape
Fits snugly
Does not get in the way when shooting a gun (unlike muffs)
Robust elastic UV material
Proven 312-type Siemens batteries provide up to 230 hours operation

A cock-and-bull story: 63 decibels

Trust quality. Enjoy comfort.
